

What is Home Health Care?

Axiom Cares has been around since 2008 helping patients with personalized care in the comfort of their homes. Specializing in three divisions: Home Healthcare, Palliative Care and Hospice Care. Axiom provides you with the best care available at your home.

What is home healthcare?

Home healthcare is a wide range of health care services that can be given in your home for an illness or injury. Home healthcare tends to be more convenient and is just as effective as the care you would get in a hospital or skilled nursing facility (SNF). Axiom Homecare provides skilled care with a multi-disciplinary approach collaborating with your physician.

What does home healthcare help with?

- Post surgical care
- Transitioning from hospital or skilled nursing facility, back to home
- Patient and caregiver education
- Managing chronic conditions like Congestive Heart Failure (CHF), Chronic Obstructive Pulmonary Disease (COPD), and Diabetes
- Supervision for someone with dementia or Alzheimer's disease

When is home healthcare appropriate?

- If you have a new diagnosis or exacerbation of existing diagnosis
- If you have a new medication or have multiple medications which cause you confusion and frustration
- If you have had recent falls or difficulty with balance
- If you are having trouble with your activities of daily living, such as showering, cooking, cleaning or other house chores
- If you have uncontrolled pain that affects your daily routine
- If you have difficulty leaving the home
- If you need to regain your range of mobility after surgery
- If you need home nursing services due to cognitive decline

Who is a part of your homecare team?

Registered Nurses

Evaluate, educate, coordinate and communicate between care providers, the care team, patients and their families.

Physical Therapists

Lead exercises that help build strength and improve balance for greater safety and independence at home.

Occupational Therapists

Teach personalized adaptive techniques for performing daily activities.

Speech Therapists

Assist with motor speech disorders, swallowing difficulty and challenges with language and cognition.

Medical Social Workers

Meet with patients and families to understand and address their personal needs at home and long term goals.

Home Health Aides

Assist the patient in the activities of daily living and provide basic routine care.
